CINDER — The Social Infrastructure for Conferences

90-Second World-Class Product Launch & Judge Presentation Deck

Discover your people. Find your Pod. Make something happen.

SCENE 01: The $2,500 Paradox: 4,000 Engineers, Staring at Phones (00:00 – 00:10)

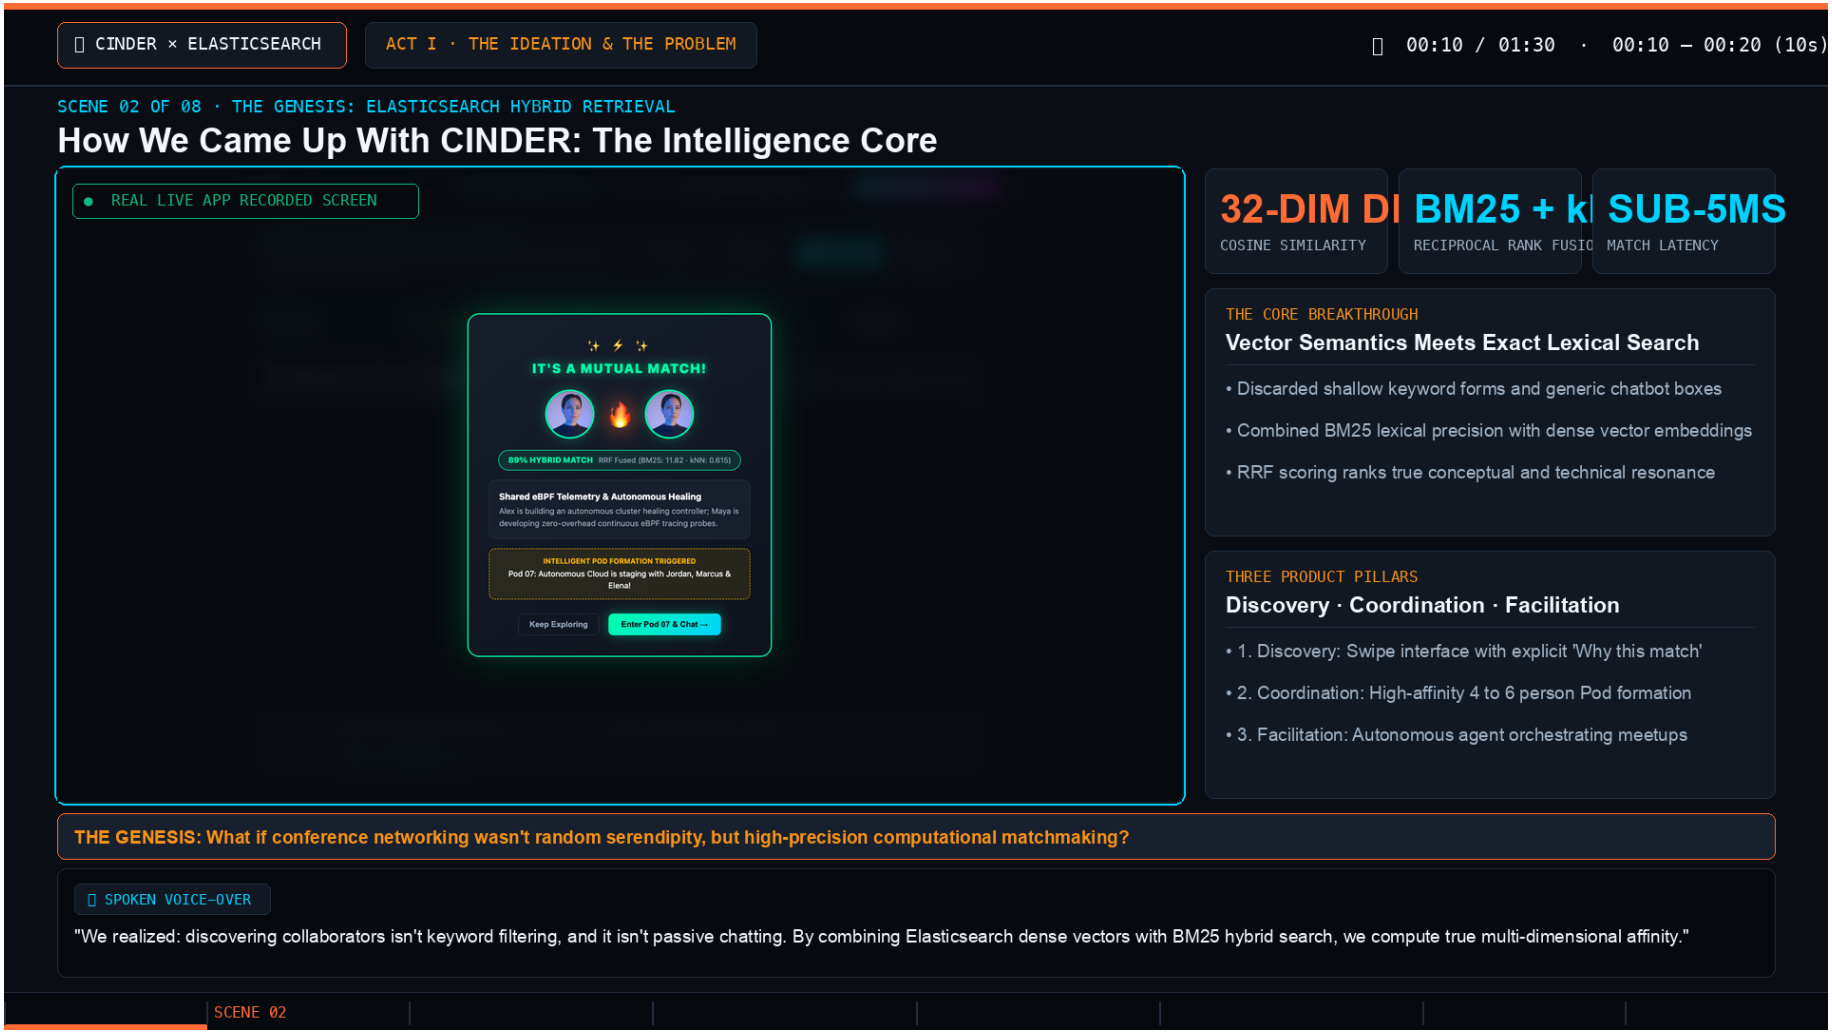

Why High-Value Technical Networking Is Left to Pure Random Chance

Spoken Narration: "Every year, millions of engineers attend conferences paying thousands of dollars. The keynote slides are online next week. The real value is the hallway track, yet networking remains completely left to chance."

SCENE 02: How We Came Up With CINDER: The Intelligence Core (00:10 – 00:20)

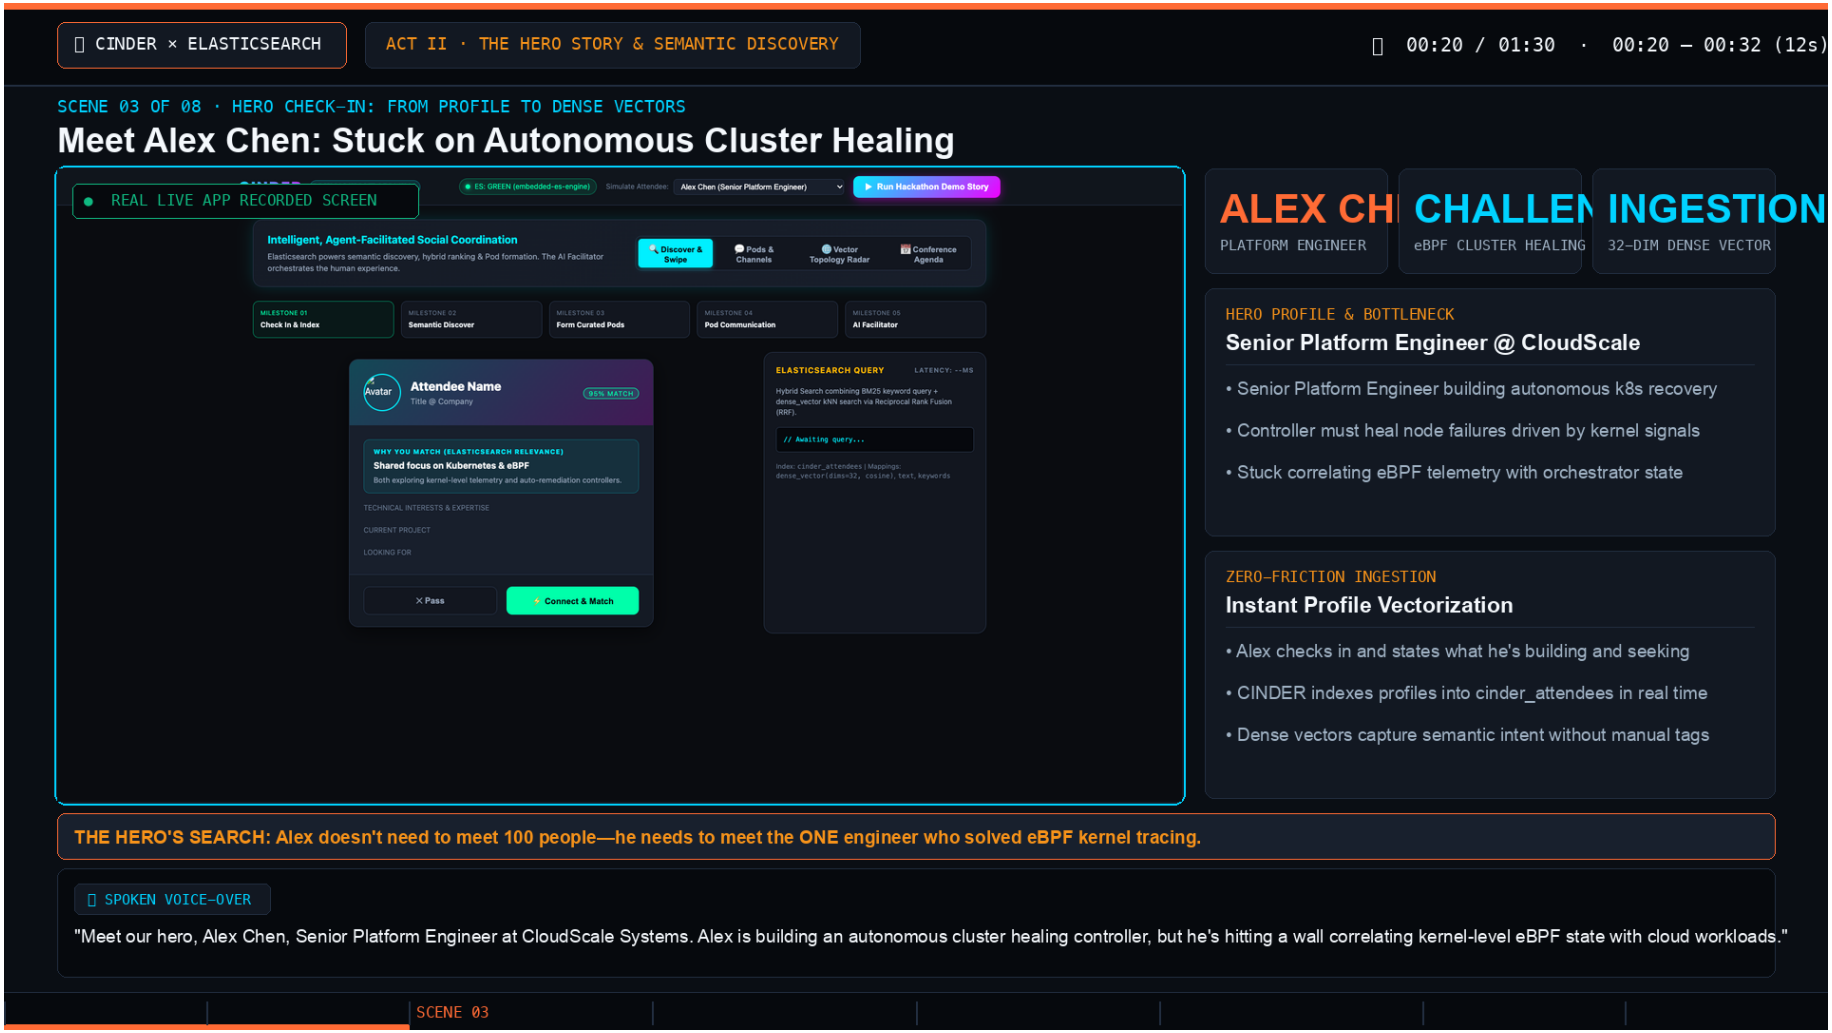

Pairing BM25 Lexical Precision & Dense Vector Semantics with Autonomous Pod Agents

Spoken Narration: "We realized: discovering collaborators isn't keyword filtering, and it isn't passive chatting. By combining Elasticsearch dense vectors with BM25 hybrid search, we compute true multi-dimensional affinity."

SCENE 03: Meet Alex Chen: Stuck on Autonomous Cluster Healing (00:20 – 00:32)

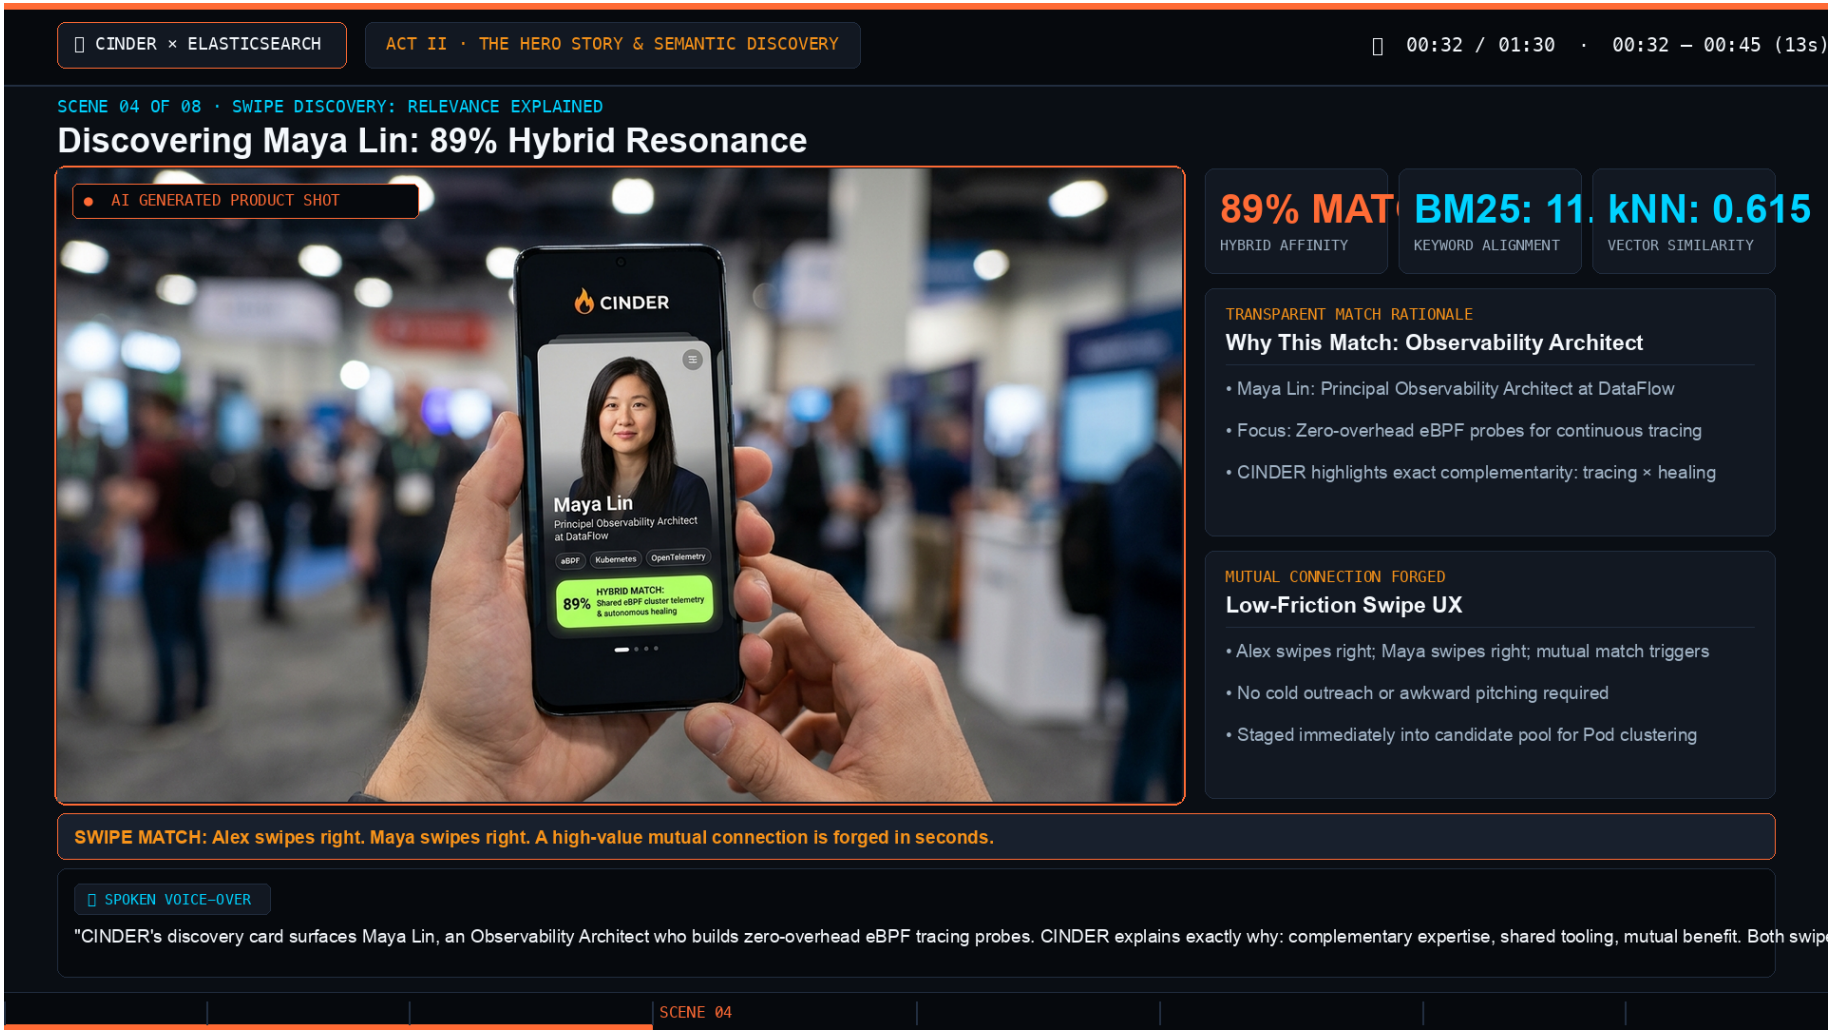

Profile Ingestion Vectorizes Complex Challenges Into Instant Semantic Coordinates

Spoken Narration: "Meet our hero, Alex Chen, Senior Platform Engineer at CloudScale Systems. Alex is building an autonomous cluster healing controller, but he's hitting a wall correlating kernel-level eBPF state with cloud workloads."

SCENE 04: Discovering Maya Lin: 89% Hybrid Resonance (00:32 – 00:45)

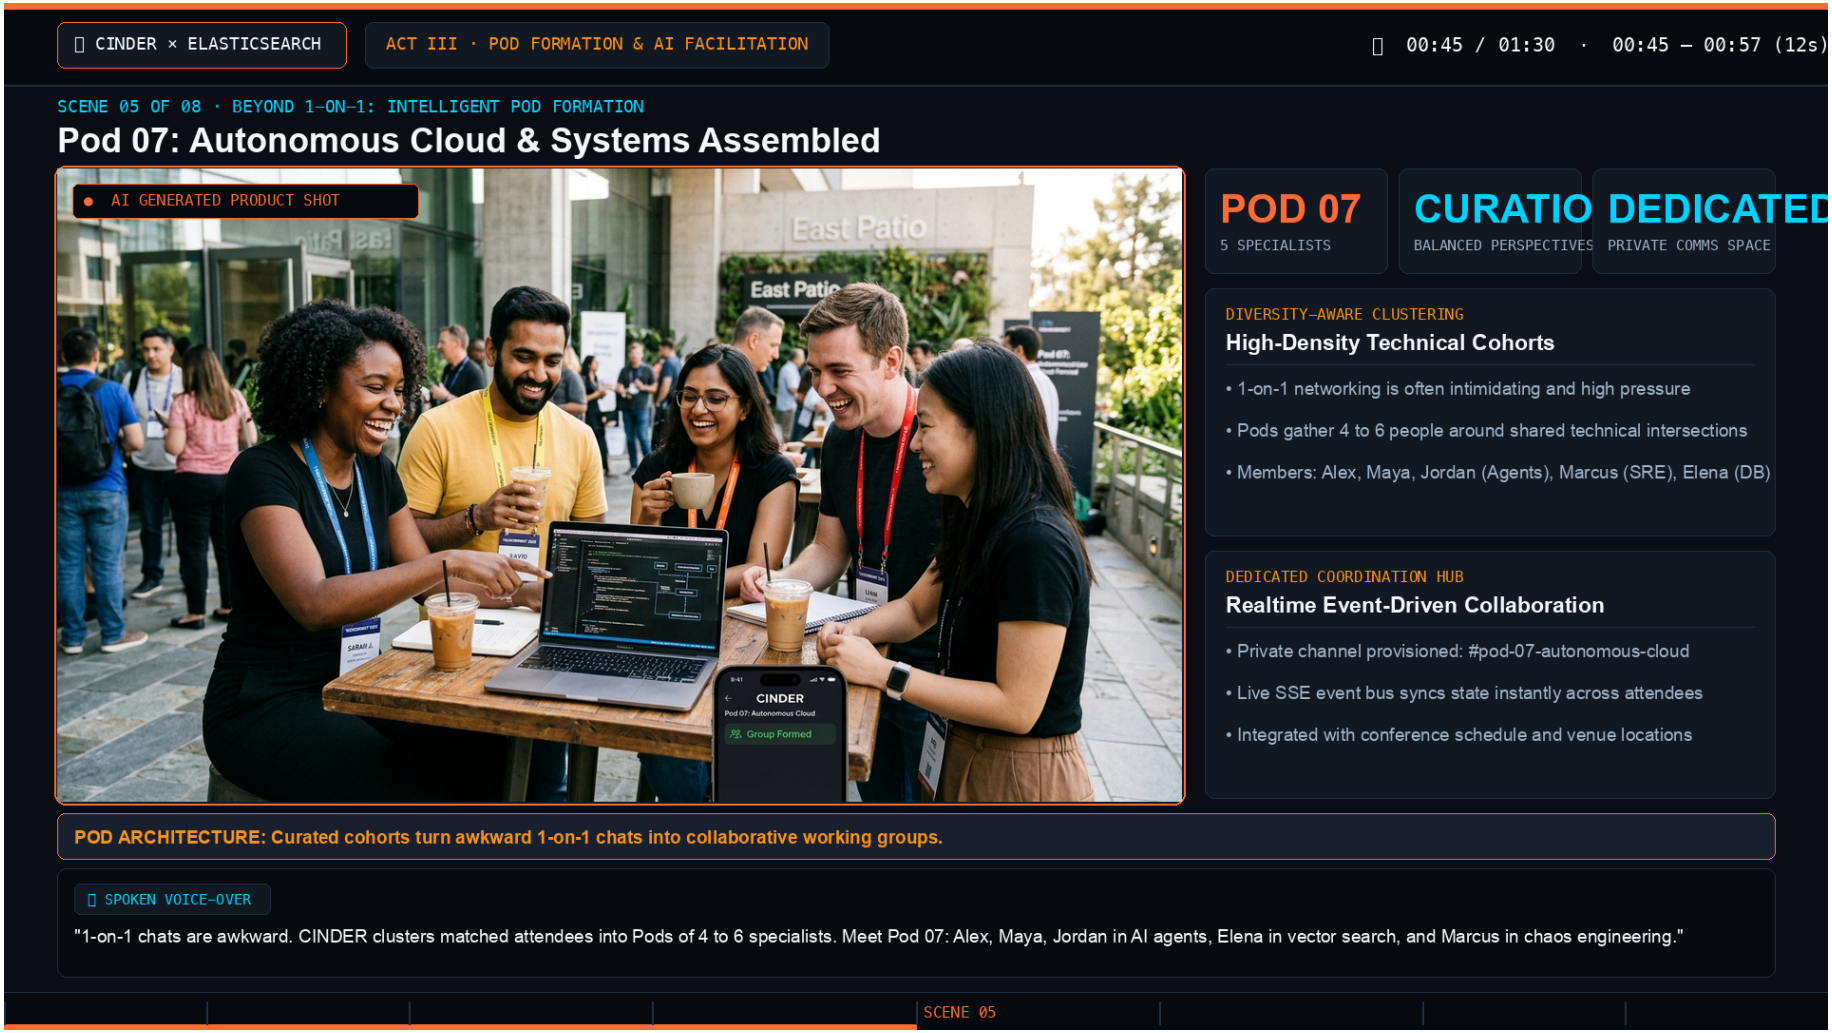

Zero-Friction Swipe Interface Backed by Reciprocal Rank Fusion & Transparent Rationale

Spoken Narration: "CINDER's discovery card surfaces Maya Lin, an Observability Architect who builds zero-overhead eBPF tracing probes. CINDER explains exactly why: complementary expertise, shared tooling, mutual benefit. Both swipe right."

SCENE 05: Pod 07: Autonomous Cloud & Systems Assembled (00:45 – 00:57)

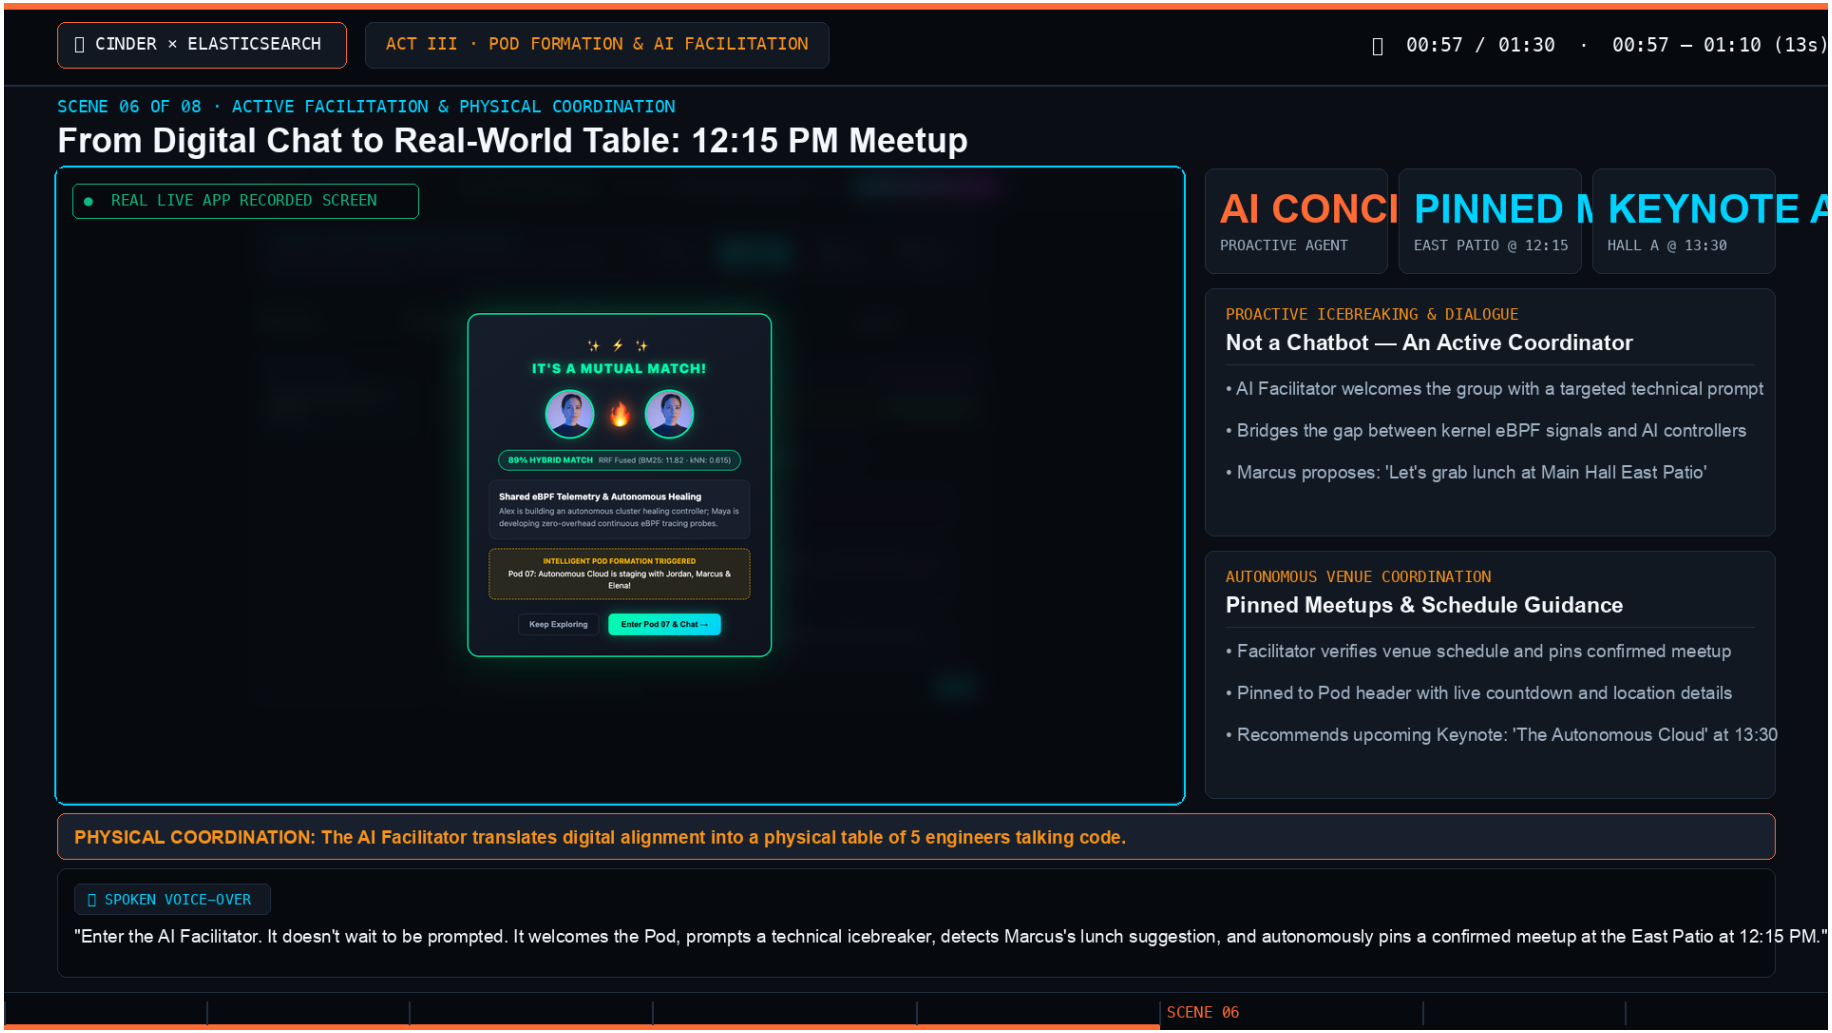

Clustering 5 Complementary Specialists for Maximum Conversational Density

Spoken Narration: "One-on-one chats are awkward. CINDER clusters matched attendees into Pods of four to six specialists. Meet Pod 07: Alex, Maya, Jordan in AI agents, Elena in vector search, and Marcus in chaos engineering."

SCENE 06: From Digital Chat to Real-World Table: 12:15 PM Meetup (00:57 – 01:10)

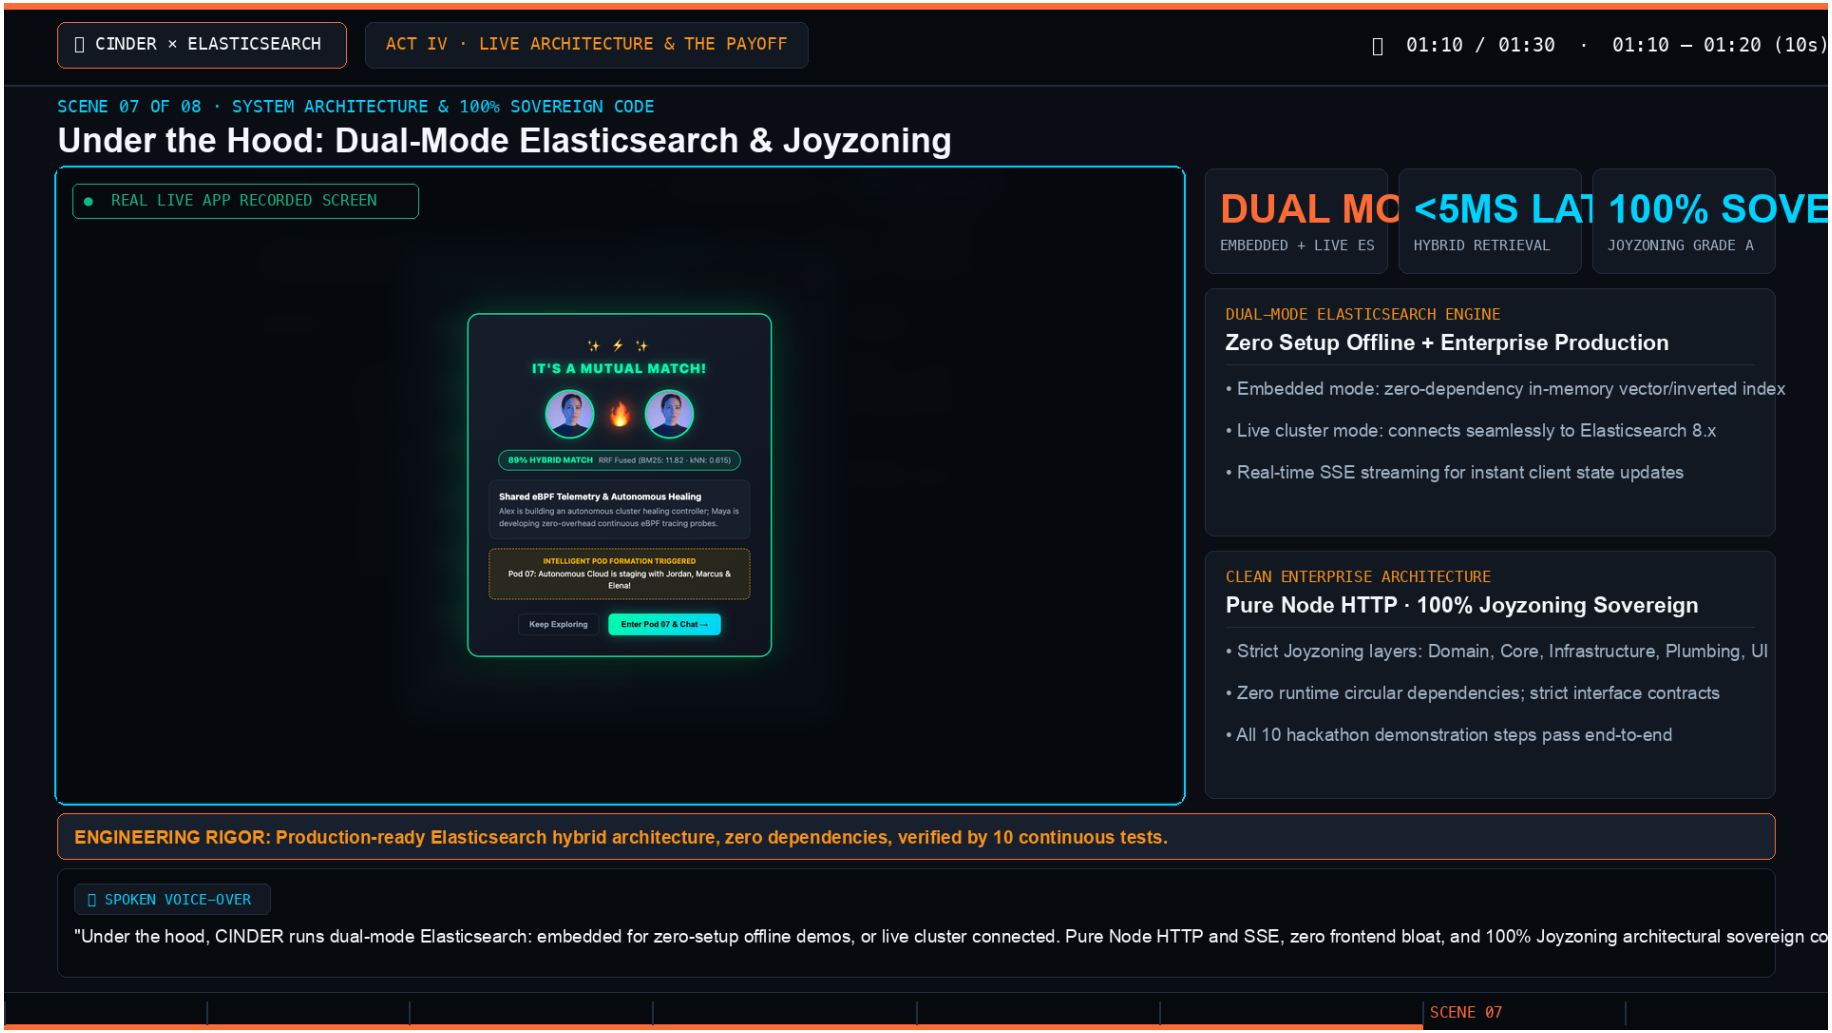

Autonomous AI Facilitator Breaks the Ice, Aligns Agendas, and Pins Meetup Location

Spoken Narration: "Enter the AI Facilitator. It doesn't wait to be prompted. It welcomes the Pod, prompts a technical icebreaker, detects Marcus's lunch suggestion, and autonomously pins a confirmed meetup at the East Patio at twelve fifteen PM."

SCENE 07: Under the Hood: Dual-Mode Elasticsearch & Joyzoning (01:10 – 01:20)

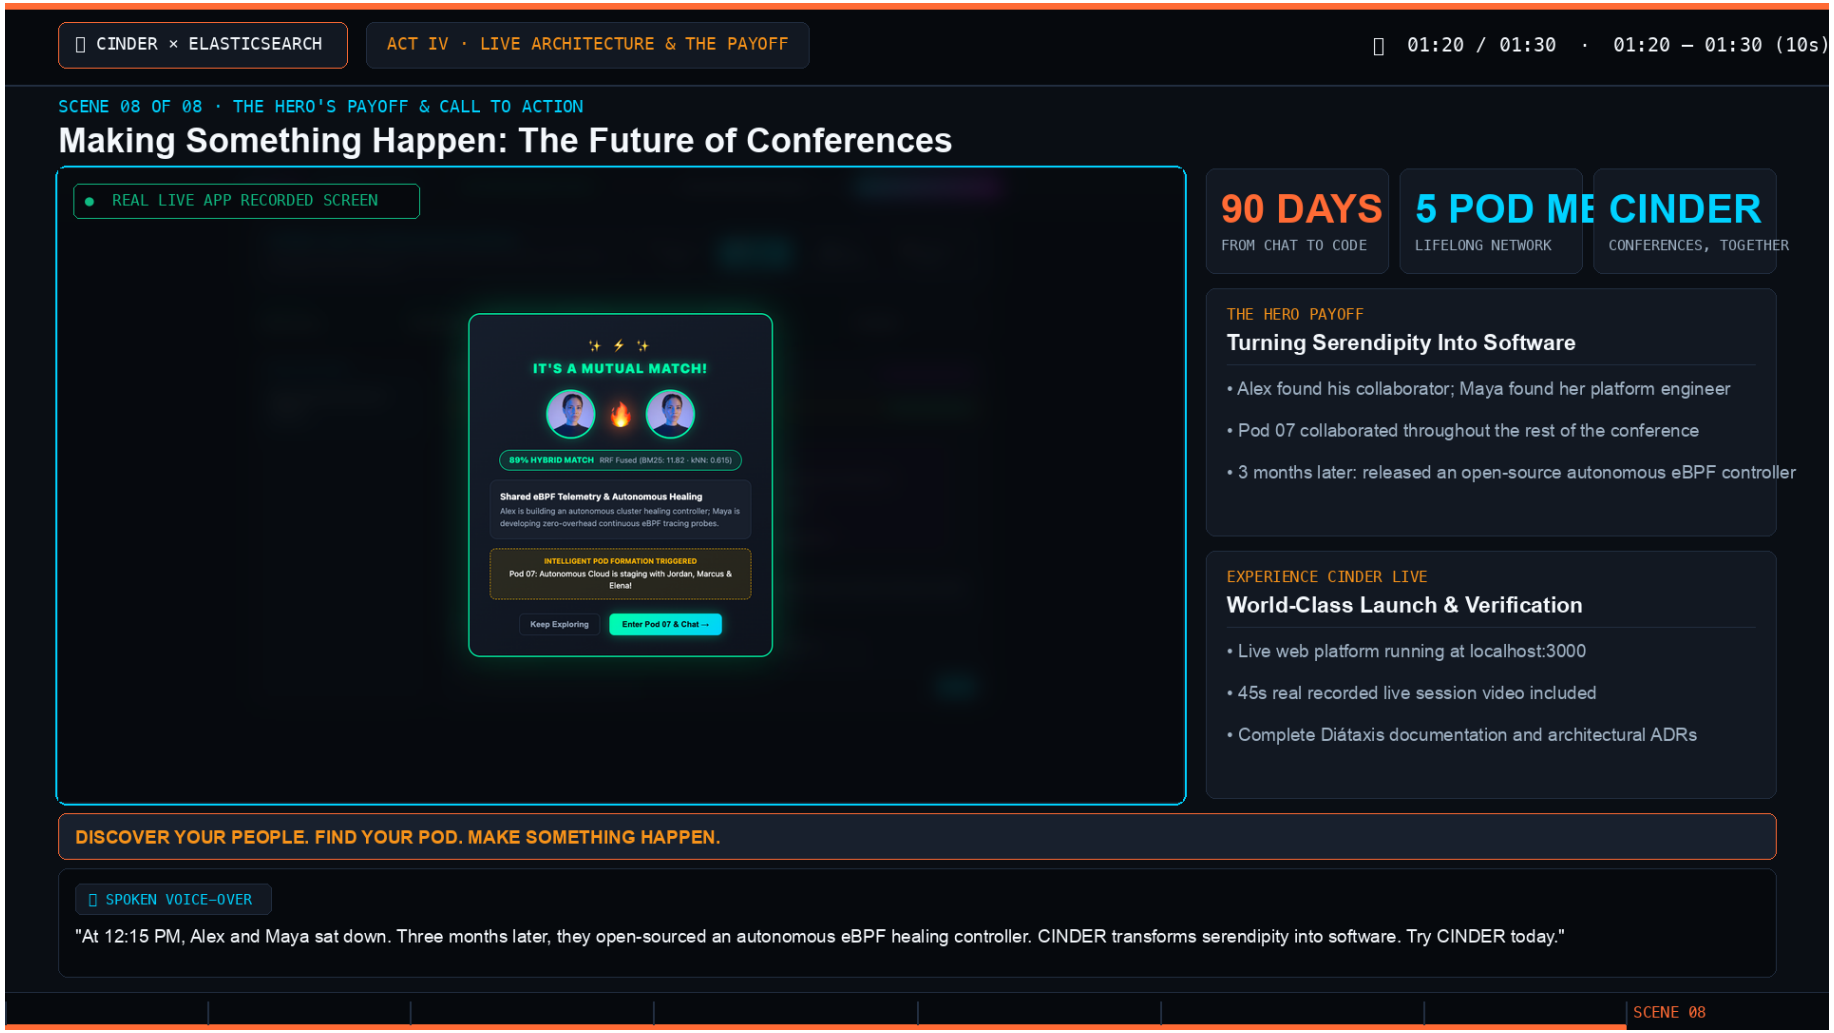

Sub-5ms Hybrid Retrieval, Zero External UI Frameworks, Complete Architectural Sovereignty

Spoken Narration: "Under the hood, CINDER runs dual-mode Elasticsearch: embedded for zero-setup offline demos, or live cluster connected. Pure Node HTTP and SSE, zero frontend bloat, and one hundred percent Joyzoning sovereign compliance."

SCENE 08: Making Something Happen: The Future of Conferences (01:20 – 01:30)

From a 12:15 Lunch to an Open-Source Autonomous Controller in 90 Days

Spoken Narration: "At twelve fifteen PM, Alex and Maya sat down. Three months later, they open-sourced an autonomous eBPF healing controller. CINDER transforms serendipity into software. Try CINDER today."
